

# High Wealth Preservation, Return Focused Portfolio

# PORTFOLIO OBJECTIVE

The Risktailors High Wealth Preservation, Return Focused Portfolio aims to deliver better risk-adjusted returns than the IA mixed investment with 0-35% share allocation over a five-year rolling horizon.

# PORTFOLIO OVERVIEW

The RiskTailors High Wealth Preservation, Return Focused Portfolio seeks to achieve its objective by gaining exposure to a range of global asset classes through cost-effective ETF solutions. The allocation to each asset class is reoptimised every quarter to maximise returns for a targeted level of volatility consistent with the risk category. It will typically maintain an exposure to global equities of between 1 3% and 15% depending on the prevailing macroeconomic and market conditions. provide better returns than its benchmark – the IA mixed investment with 0-35% share allocation – but with comparable level of market volatility.

#### **COMMENTARY**

Q1 2024 was the third complete quarter since RiskTailors' launch that our portfolios have been at risk-on allocation to reflect the change in macroeconomic conditions. By the end of the quarter, the Fathom Risk-Off Gauge (FROG) — a probabilistic assessment of whether markets are in a risk-on or off phase — has stayed into risk-on territory. Although pressure from geopolitical developments added volatility on the month-to-moth assessment, risk-on prevailed at the end of the quarter. The products continue to perform according to expectations of its risk and investment journey preference. The risk-on deployment helped in closing the gap with the benchmark at the end of 2023. But in 2024, the evolving risk-on allocation helped all products to move ahead of their benchmarks. Especially the less risk averse balanced, reward, and high reward products moved 1.9% and 7.2% ahead of their benchmarks, YTD, reflecting the dynamism of the allocation process. For Q2 2024 there are still two major risks that could derail the global economy (while both risks could be amplified by an escalation in geopolitical tensions): a further credit squeeze triggered by the impact of interest rates that are left high for too long, and a persistent inflationary pressure that could force central banks to tighten policy further. These two scenarios have been named 'It's out for delivery' and 'Sticky inflation'. Only the US seems able to avoid both risks in 2024. The RiskTailors asset allocation framework monitors these types of risks as the macroeconomic and market environment evolves. The few rebalancing changes at the end of Q1 2024 slightly increase government over corporate fixed income. The exposure to equities and precious metals will remain roughly the same
